Lifting tongs and grabs are both commonly used lifting tools, but they have different uses and structures. Lifting tongs are mainly used to carry flat objects such as steel plates and metal plates. They have clamping and locking functions and are suitable for lifting operations in industries such as steel and machinery. Grabs are used to grab and carry bulk materials such as coal, soil and stone. They are often used in construction, mining, ports and other fields. Their structure usually consists of multiple openable and closable grips for effective material grabbing. Both improve work efficiency and ensure safety in their respective application fields.
