According to our (Global Info Research) latest study, the global Lifting Weight Limiter market size was valued at US\$ 137 million in 2025 and is forecast to a readjusted size of US\$ 171 million by 2032 with a CAGR of 3.4% during review period.

A lifting weight limiter is a safety protection device installed on lifting machinery to monitor load weight or load moment in real time. When the measured value exceeds the rated lifting capacity, it triggers an alarm or automatically restricts equipment operation to prevent structural damage or tipping accidents caused by overload. It typically uses load cells, tension sensors, or load moment calculation systems and serves as a critical component of crane safety control systems.

Upstream includes load cells or tension sensors, signal acquisition and control modules, display units, and mounting structures. Downstream applications include tower cranes, truck-mounted cranes, gantry cranes, and various industrial lifting equipment. The overall industry gross margin generally ranges from 25% to 45%, with higher margins for intelligent digital and high-precision models.

In 2025, the global production of lifting weight limiters is estimated at 202,000 units, with an average price of \$650 per unit.
