According to our (Global Info Research) latest study, the global Light Cushion Running Socks market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Light cushion running socks are usually ?mapped? or ?zoned? in construction. This means there are different weights of fabric for different parts of the foot. The heel and ball of the foot usually has a heavier fabric for cushioning and durability. Thinner areas around the top of the foot allow more breathability. A tighter weave around the arch of the foot adds support and helps to keep the sock in place.
