The global Light Diffuser Film For Liquid Crystal Display market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Light diffuser film for liquid crystal display is mainly composed of three layers, including the bottom anti-scratch layer, the middle transparent PET substrate layer and the top diffusion layer. Diffusion film products refer to curing the optical glue into a pre-designed optical structure diffusion coating on the PET substrate through the method of precision coating, so that the light diffuses through the diffusion coating and makes the light distribution uniform. A new type of high-performance optical material that uniformly converts point or line light sources into surface light sources.
