According to our (Global Info Research) latest study, the global Light Diffusion Additive market size was valued at US\$ 1313 million in 2024 and is forecast to a readjusted size of USD 1838 million by 2031 with a CAGR of 5.0% during review period.

Light diffusion additive is a substance that is added to materials or coatings to scatter or diffuse light. It is used to reduce glare, improve light distribution, and create a more uniform appearance. Light diffusion additives can be incorporated into various products such as paints, plastics, films, and coatings. They work by scattering the light that passes through the material, which helps to eliminate hotspots and create a softer, more diffused light. This can be particularly useful in applications such as lighting fixtures, display panels, signage, and optical devices where a uniform and visually pleasing light distribution is desired.
