## Abstracts

The global Light Duty Ethernet Switch market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Light Duty Ethernet Switch is a type of network hardware that connects cabled devices, such as computers, printers, servers, and IoT devices, in an Ethernet LAN so they can communicate with each other and to the internet?. It differs from a router, which connects networks and uses only a single LAN and WAN port. A Light Duty Ethernet Switch is designed for small-scale or home use, with fewer ports and lower bandwidth than a heavy-duty switch.

The upstream industry chain of a Light Duty Ethernet Switch includes the manufacturers of the switch components, such as chips, cables, connectors, and cases. The downstream industry chain includes the distributors, retailers, and end-users of the switch products, such as home users, small businesses, schools, and offices.

This report studies the global Light Duty Ethernet Switch production, demand, key manufacturers, and key regions.
