The global Light Electric Hospital Bed market size is expected to reach \$ 2280.6 million by 2029, rising at a market growth of 4.3% CAGR during the forecast period (2023-2029).

A light electric hospital bed is a type of hospital bed that is powered by electricity and can be adjusted electronically to meet the needs of the patient. These beds typically have a remote control that allows the patient or caregiver to adjust the height of the bed, as well as the angle of the head and foot sections. Compared to manual hospital beds, light electric hospital beds provide greater ease of use and comfort for patients, as they can be adjusted with the touch of a button. They are also easier for caregivers to operate and can reduce the risk of injury when transferring or repositioning patients. Light electric hospital beds are commonly used in hospitals, nursing homes, and other medical settings, as well as in home care settings.
