Abstracts

Light-field is an emerging concept for representing rich 3D visual information that is able to capture real world phenomena with unprecedented image quality. A light field describes visual information as a set of light rays that pass a (sensor / display) surface, but apart from capturing the position and color of each light ray, the direction of each light rays is also recorded. Both light-field cameras and light-field display exist in the market as of today (from Raytrix and Holografika, respectively).

SCOPE OF THE REPORT:

Light-field displays can reproduce hologram-like, full color, real time representations of anything that can be captured in light-field format, light-field cameras can capture 4D information of a subject, which can be used to reconstruct the depth of the recorded scene for every pixel, as well as to reconstruct all-in-focus images, all from a single shot.

The global Light Field Imaging & Display market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.
