According to our (Global Info Research) latest study, the global Light Field market size was valued at USD 160.4 million in 2023 and is forecast to a readjusted size of USD 331.2 million by 2030 with a CAGR of 10.9% during review period.

The light field is a vector function that describes the amount of light flowing in every direction through every point in space. The space of all possible light rays is given by the five-dimensional plenoptic function, and the magnitude of each ray is given by the radiance. Michael Faraday was the first to propose (in an 1846 lecture entitled 'Thoughts on Ray Vibrations') that light should be interpreted as a field, much like the magnetic fields on which he had been working for several years. The phrase light field was coined by Andrey Gershun in a classic paper on the radiometric properties of light in three-dimensional space (1936).

North America is the largest Light Field market with about 64% market share. Europe is follower, accounting for about 18% market share.
