Abstracts

The global Light Load Latent AMR market size is expected to reach \$ 445 million by 2032, rising at a market growth of 8.4% CAGR during the forecast period (2026-2032). In 2025, global production of light load latent autonomous mobile robots (AMRs) reached approximately 8,400 units, with an average selling price of around USD 28,000 per unit. Light load latent AMRs are autonomous mobile robots primarily used in warehousing, logistics, light industry, and component handling scenarios, capable of navigating, avoiding obstacles, and transporting lightweight materials without external tracks or fixed guidance systems. These robots typically feature autonomous positioning systems, path planning algorithms, and multi-sensor fusion capabilities, improving operational flexibility and efficiency, and serving as key equipment for advancing automation in light-load logistics and smart warehousing.

Currently, the market for light load latent AMRs is in a phase of rapid expansion, driven by increasing demand from e-commerce logistics, smart warehousing, and light industry automation. Market conditions indicate that the segment is dominated by a few manufacturers with capabilities in autonomous navigation, path planning, and system integration, serving downstream customers such as e-commerce warehouses, light manufacturing, and component distribution centers.

This report studies the global Light Load Latent AMR production, demand, key manufacturers, and key regions.
