According to our (Global Info Research) latest study, the global Light Oil Separator market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Light oil separator is a kind of equipment that can achieve the light oil content meeting the national emission standards after the oil wastewater is treated. It is mainly used to treat wastewater with light oil liquids (such as diesel, gasoline, hot oil, etc.) with a specific gravity lower than 0.95g/m³, insoluble or slightly soluble in water, and not easy to saponify. It uses the characteristic that the specific gravity of light oil is less than that of water to separate light oil from water by gravity separation or centrifugal separation. It is widely used in gas stations and machine repair workshops, food processing, ports and other fields.
