According to our (Global Info Research) latest study, the global Light Vehicle Motor market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A motor is a component that converts battery energy into mechanical energy and drives the wheels of an electric vehicle to rotate. Car driving is characterized by frequent starting, acceleration, deceleration, and parking. High torque is required at low speeds or climbing, and low torque is required at high speeds. The speed range of the motor should be able to meet the requirements of the car from zero to the maximum driving speed, that is, the motor must have a high specific power and power density.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
