A lightning arrester for a power station is an electrical protection device used to protect power station equipment in a power system from lightning overvoltage or operating overvoltage. It is usually installed at the front end of key equipment such as transformers, high-voltage switches, and busbars. The device can quickly conduct when lightning or abnormal voltage waves arrive, introduce overvoltage into the ground wire, and limit its amplitude, thereby effectively protecting the insulation of the equipment from breakdown. It is an important protective facility to ensure the safe and stable operation of the power station.
