Abstracts

According to our (Global Info Research) latest study, the global Lightning Protection Varistor market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

As the name suggests, the main job of Lightning Protection Varistor is to protect electrical appliances during thunderstorms. The working principle of this kind of varistor is that it is connected in parallel with the electrical appliance in the circuit. When the electrical appliance is working normally, its own resistance is very large, so it basically has no effect. When a large current flows through the circuit, the lightning protection varistor turns on instantly, causing all the current in the circuit to flow through the lightning protection varistor, thereby protecting electrical appliances. Lightning Protection Varistor is a metal oxide semiconductor non-linear resistor element with zinc oxide as the main component. The resistor is sensitive to voltage. When the voltage reaches a certain value, the resistor turns on quickly. Because the varistor has good non-linear characteristics, large flow rate, low residual voltage level, fast action and no freewheeling, etc. It is widely used in lightning protection of electronic equipment.
