Abstracts

The global Lightning Strike Testing Services market size is expected to reach \$ 1695 million by 2032, rising at a market growth of 5.6% CAGR during the forecast period (2026-2032).

To address the problems of electrical and electronic equipment being susceptible to damage in lightning environments, lacking reliability, and facing difficulties in verifying compliance with safety standards, lightning strike testing services have emerged. Since their gradual standardization in the mid-20th century with the rapid development of power systems and electronic information technology, these services have become a key technical support for ensuring the stable operation of equipment in natural lightning and induced surge environments. Currently, lightning strike testing services have developed into a comprehensive range of testing projects, including direct lightning strike simulation, induced lightning surge testing, combination wave testing, and related electromagnetic compatibility (EMC) evaluation. These services are widely used in power facilities, communication systems, aerospace, wind power energy, rail transit, and smart buildings, providing professional technical services that effectively verify product protection design, improve system reliability, and ensure compliance with international and domestic safety regulations.
