## Abstracts

The global Lightweight Stove market size is expected to reach \$ 882.6 million by 2030, rising at a market growth of 5.9% CAGR during the forecast period (2024-2030).

The increasing importance of camping stoves for limited time cooking during holiday camping is expected to expand the market scope. These stoves are expected to gain momentum due to their lightweight, fast boiling time, compactness and ease of use. Millennials are turning to outdoor recreational activities such as camping, backpacking, climbing and hiking, boosting the use of accessories such as camping stoves, tents and backpacks. Governments across the world are investing in the outdoor tourism business, which will further drive the demand for camping stoves. The American people are one of the main participants in camping activities. In 2023, approximately 50.5 million Americans ages 6 and older went camping at least once. Participation rates are up from 2022. Buyers are also spending significantly more on camping gear. In 2023, adult participants spent an average of \$746.41 on camping gear. According to the North American Camping Report, approximately 77 million U.S. households camp at least occasionally. Most of them spend three times a year on these activities. The increasing number of adventure and camping activities is expected to remain one of the key trends due to increased spending on entertainment activities by Millennials.

Lightweight stove is made of aluminum alloy and stainless steel which can stand high temperature and weight; High-energy ceramic piezoelectric ignition system make it very convenience for outside camping or hiking.
