According to our (Global Info Research) latest study, the global Lignin Products market size was valued at USD 746.4 million in 2023 and is forecast to a readjusted size of USD 827.5 million by 2030 with a CAGR of 1.5% during review period.

Lignin is the most abundant natural raw material available on Earth in terms of solar energy storage. It represents 30 per cent of all the non-fossil organic carbon on Earth. Lignin can be used as a green alternative to many petroleum-derived substances, such as fuels, resins, rubber additives, thermoplastic blends, nutra and pharmaceuticals. It is also known to be the only renewable source for industrial aromatics production. Lignin can be found in other plants, such as cereal straws, bamboo and bagasse, but it is in wood that lignin content is the highest in terms of weight: 20–35 percent in wood compared to 3–25 per cent in other lignin sources. Typically, kraft and organosolv lignins are two suitable candidates, whereas liginosulfonates will most likely lead to lower-value chemicals, which require more complicated processing.

Global key players of Lignin Products include Borregaard LignoTech, Domsjo Fabriker, Nippon Paper and Qingdao Pufeirui. The top four players hold a share about 61%. The global origin is mainly distributed in North America, Europe, China and South America, of which Europe is the largest production region, holding more than 45% of the market share; followed by China, accounting for 27%. In terms of product, sodium liginosulfonate is the largest segment, with a share about 29%. And in terms of application, the largest application is construction, with a share about 43%.
