According to our (Global Info Research) latest study, the global Limiter Diodes market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A limiting diode, also known as a diode clipper or diode limiter, is a semiconductor device used to limit the amplitude range of a signal to prevent excessive signal damage to other components in the circuit. It is commonly used in electronic circuits to protect equipment from overvoltage. With the increase in communications and high-frequency electronic equipment, the demand for high-frequency limiting diodes is also increasing. Therefore, future trends will include the development of limiting diodes for higher frequency ranges. Applications in extreme temperature environments require better temperature stability, so limiting diodes will be designed with a wider temperature range in mind.
