According to our (Global Info Research) latest study, the global LIN RGB LED Controllers market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

LIN RGB LED controller consists of physical layer LIN transceiver, LIN controller, voltage regulator and 16-bit RISC-based microcontroller, and supports ADC, 16-bit current modulation, constant current high voltage output, with LED color and aging compensation and other functions. RGB LED modules can be used for lighting, backlighting or indication in vehicles. The color setting command is sent to the ambient light through the LIN bus of the car's central control host, thereby changing the color of the ambient light and creating a comfortable atmosphere in the car. It can also be used in other colored lights with decorative applications
