## Abstracts

The global LIN RGB LED Controllers market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

LIN RGB LED controller consists of physical layer LIN transceiver, LIN controller, voltage regulator and 16-bit RISC-based microcontroller, and supports ADC, 16-bit current modulation, constant current high voltage output, with LED color and aging compensation and other functions. RGB LED modules can be used for lighting, backlighting or indication in vehicles. The color setting command is sent to the ambient light through the LIN bus of the car's central control host, thereby changing the color of the ambient light and creating a comfortable atmosphere in the car. It can also be used in other colored lights with decorative applications
