## Abstracts

According to our (Global Info Research) latest study, the global Line Reactor market size was valued at US\$ 193 million in 2025 and is forecast to a readjusted size of US\$ 250 million by 2032 with a CAGR of 3.8% during review period.

A line reactor (also referred to as a 'choke') is a variable frequency drive (VFD) accessory that consists of a coil of wire that forms a magnetic field as current flows through it. This magnetic field limits the rate of rise of the current, thus reducing harmonics and protecting the drive from power system surges and transients. There are two primary types of reactors used in variable frequency drives: AC & DC. When an AC reactor is placed between the power system and the drive, it is referred to as an Below 100A Line Reactor. When a DC reactor is inserted into the DC link of a variable frequency drive, it is known as a DC link reactor.

Global key players of Line Reactor include TDK, TE Connectivity and MTE Corporation, etc. The top three players hold a share over 27%. North America is the largest market, has a share about 32%. In terms of product type, Below 100A Line Reactor is the largest segment, occupied for a share of about 60%, and in terms of application, Machining has a share about 21 percent.
