Abstracts

The global Line Scan Industrial Camera market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The sensor of a line scan industrial camera has only one line of photosensitive elements, thus making high scanning frequency and high resolution possible. Typical areas of application are the detection of continuous materials such as metals, plastics, paper and fibers. The detected object usually moves at a constant speed, and one or more cameras are used to continuously scan it line by line to achieve uniform detection of its entire surface. In addition, line scan cameras are ideal for measurement applications, thanks to the high resolution of the sensor, which can measure accurately down to the micron. It is mainly used in image processing in the fields of industry, medical treatment, scientific research and security.
