Linear drive, also known as electric push rod, is a new type of electric actuator. It performs reciprocating motion within a certain range of travel, converting the rotational motion of the motor into linear reciprocating motion, and can actively achieve the comprehensive application of complex functions such as lifting, stretching, and angle adjustment of the entire mechanical system.

The linear driven market size in the medical field is approximately 15 billion yuan. Linear drive can be used in medical devices such as electric medical beds, electric nursing beds, elevating examination tables, and electric wheelchairs in the medical industry. If linear drive products account for 0.50% of the medical device equipment market size, the global and Chinese medical device market sizes in 2020 were 477.4 billion US dollars and 734.1 billion yuan, respectively. The linear drive market sizes were 2.387 billion US dollars (15.2 billion yuan) and 3.67 billion yuan, respectively.
