The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Linear Brake Pad is a brake pad used in the braking system of automobiles. A linear brake pad means that its braking surface is in the shape of a straight line, as opposed to a curved brake pad. Linear brake pads are usually made of organic materials or semi-metallic materials, which have the characteristics of smooth braking effect and low noise, and are suitable for ordinary models and urban roads. The braking area of the linear brake pad is smaller than that of the arc brake pad, so the friction force generated during braking is relatively small, and the braking effect is relatively weak. However, due to its smooth braking effect and low noise, it is widely used in ordinary cars and urban roads.
