According to our (Global Info Research) latest study, the global Linear Comparator market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Linear comparator products can be used to evaluate the relative magnitude of two analog input signals and generate a binary (two-state) output indicating which of the two signals is greater. Closely related in function to op amps, linear comparators are specifically designed to withstand the open-loop operation and large differential input conditions common in analog comparison applications that can cause standard op amps to underperform.
