A linear constant current LED driver is a power management integrated circuit designed specifically for LED lighting. It uses linear regulation to ensure that the LED can obtain a stable current under various input voltage conditions, thereby maintaining consistent brightness and extending the life of the LED. The main advantage is its high-precision current control capability, which can provide a very stable output current and maintain the consistency of LED brightness even when the input voltage fluctuates. They usually have multiple protection functions, such as overheat protection, short circuit protection, and overvoltage protection, to improve the reliability and safety of the system.
