## Abstracts

According to our (Global Info Research) latest study, the global Linear Drive Linear Motor market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A linear drive linear motor is a drive solution that differs from a rotary motor: Unlike a rotary machine, a linear motor does not generate rotating movement for the driven object. Instead, it moves the object in a straight line or along a curved track. A linear motor is used when the dynamics that a rotating servomotor achieves are insufficient and a direct linear movement has to be implemented instead.
