Abstracts

The global Linear Joint Motors market size is expected to reach \$ 251 million by 2032, rising at a market growth of 15.8% CAGR during the forecast period (2026-2032).

Linear joint motors typically refer to motors used in robots, especially linear actuators in humanoid robots. In most cases, they are not 'linear motors' that directly output linear motion. Instead, they convert the rotational motion of the motor into linear push-pull motion through a rotary motor and lead screw transmission mechanism, thereby driving the robot joints to produce swinging, extension, or supporting movements.

This report studies the global Linear Joint Motors production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Linear Joint Motors and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Linear Joint Motors that contribute to its increasing demand across many markets.
