## Abstracts

According to our (Global Info Research) latest study, the global Linear Low-Density Polyethylene (LLDPE) market size was valued at USD 49660 million in 2023 and is forecast to a readjusted size of USD 60930 million by 2030 with a CAGR of 3.0% during review period.

Linear low-density polyethylene (LLDPE) is a substantially linear polymer (polyethylene), with significant numbers of short branches, commonly made by copolymerization of ethylene with longer-chain olefins. Linear low-density polyethylene differs structurally from conventional low-density polyethylene (LDPE) because of the absence of long chain branching. The linearity of LLDPE results from the different manufacturing processes of LLDPE and LDPE. In general, LLDPE is produced at lower temperatures and pressures by copolymerization of ethylene and such higher alpha-olefins as butene, hexene, or octene. The copolymerization process produces a LLDPE polymer that has a narrower molecular weight distribution than conventional LDPE and in combination with the linear structure, significantly different rheological properties.

Global Linear Low-density Polyethylene (LLDPE) key players include DOW, ExxonMobil, SABIC, Borealis, NOVA Chemicals, etc. Global top five players hold a share about 35%.

North America is the largest market, with a share about 25%, followed by Middle East and Africa and China, having a total share about 35 percent.
