Abstracts

According to our (Global Info Research) latest study, the global Linear Piezo Flexure Stage market size was valued at US\$ 834 million in 2024 and is forecast to a readjusted size of USD 1281 million by 2031 with a CAGR of 4.4% during review period.

Linear Piezo Flexure Stage is a precision positioning device that utilizes piezoelectric actuators and flexure hinges to achieve high-resolution, accurate, and stable linear motion. Piezoelectric actuators work on the principle of the piezoelectric effect, where an electric field applied across certain materials causes them to change shape, thus generating mechanical displacement. Flexure hinges, on the other hand, provide compliant mechanisms for guiding and amplifying this displacement without the backlash, friction, and wear associated with traditional mechanical linkages.
