## Abstracts

According to our (Global Info Research) latest study, the global Linear Reducer market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Linear reducer is a kind of equipment with functions of reducing speed, driving and improving torque. Miniature reducer commonly used include miniature DC brush reducer, miniature brushless reducer, miniature stepping reducer, miniature planetary reducer, miniature hollow cup reducer, etc; The drive structure of the micro-reducer is composed of a micro-motor and a reduction gear box, which can provide high torque and low speed output. The lower the speed, the greater the torque, and the higher the speed, the smaller the torque. The greater the torque, the greater the load will be and the higher the reduction ratio will be. The micro reduction motor is very important for the selection of drive motor.
