Abstracts

The global Linear Reducer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Linear reducer is a kind of equipment with functions of reducing speed, driving and improving torque. Miniature reducer commonly used include miniature DC brush reducer, miniature brushless reducer, miniature stepping reducer, miniature planetary reducer, miniature hollow cup reducer, etc; The drive structure of the micro-reducer is composed of a micro-motor and a reduction gear box, which can provide high torque and low speed output. The lower the speed, the greater the torque, and the higher the speed, the smaller the torque. The greater the torque, the greater the load will be and the higher the reduction ratio will be. The micro reduction motor is very important for the selection of drive motor.
