According to our (Global Info Research) latest study, the global Linear Stopper market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A linear stopper is a metal fitting designed to prevent a work plate, which serves as a mounting base for a workpiece, from dislodging from a guide rail, such as a linear guide or slide rail, or for precisely positioning the work plate. It is also commonly referred to as a linear stopper or linear lock.

Linear stoppers are typically constructed from steel or stainless steel. Some stoppers come equipped with urethane rubber or urethane rubber bolts to minimize impact between the table and the stopper. The bolts and other components of the stopper are crafted from S45C steel, which undergoes hardening to enhance wear resistance.
