Abstracts

The global Linear Transfer Systems market size is expected to reach \$ 991.5 million by 2029, rising at a market growth of 7.7% CAGR during the forecast period (2023-2029).

Global 5 largest manufacturers of Linear Transfer Systems are Bosch Rexroth AG, ATS Automation, Rockwell Automation, Beckhoff Automation and B&R Industrial Automation(ABB), which make up about 65%. Among them, Bosch Rexroth AG is the leader with about 21% market share.

Asia-Pacific is the largest market, with a share about 39%, followed by Europe and North America, with share about 32% and 25%. In terms of product type, Hydraulic Linear Transfer Systems occupy the largest share of the total market, about 86%. And in terms of product application, the largest application is Automotive Assembly Line, followed by Medical and Life Sciences Assembly Line.

When assembly processes call for the interlinking of complex processes, linear transfer systems are used for the assembly, testing and inspection of components, and in particular when a deep vertical range of manufacture is required. These systems can also be interlinked with rotary indexing systems to accommodate complex tasks. The various processing stations are arranged in series to form a chain. This linear chain can be easily expanded and/or contracted, and changes in the assembly sequence can be quickly achieved by exchanging or regrouping the station inserts.

Materials, parts, and semi-finished products are physically moved to new locations for further processing. New real estate affords us space to break down a process into smaller, simpler steps and decrease complexity. This means tooling can be dedicated to a single task, there is more room for delivering additional components, and while the

transfer time is not always productive with some optimization we see great benefit to total takt time. To put it in context the Model assembly time was reduced by half because of linear transfer automation.
