Liner service, also known as a shipping line, is a company that provides shipping transportation services via maritime shipping routes. Liner services are essential to the global transportation system, transporting goods and materials between countries and regions.

Liner services typically operate on a fixed schedule, with vessels departing and arriving at specific ports on specific days. This allows shippers to plan their transportation needs and provides predictability for both shippers and receivers.

Liner services typically offer various shipping options, including container shipping, bulk shipping, and breakbulk shipping. Container shipping is the most common type of liner shipping and involves transporting goods in standard containers that can be loaded and unloaded using container cranes. Bulk shipping is the transportation of unpackaged goods, such as coal, oil, and grain, in large quantities.
