Abstracts

The global Linerless Label Rolls market size is expected to reach $ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Linerless label rolls find applications in various industries, including retail, logistics, food and beverage, manufacturing, healthcare, and more. They are commonly used for product labeling, price marking, barcode printing, shipping labels, and other labeling needs. The absence of a liner simplifies the labeling process, increases labeling efficiency, and reduces waste, making linerless label rolls an attractive option for businesses seeking sustainable labeling solutions.

Linerless label rolls are a type of self-adhesive label that does not have a liner or backing paper typically found in traditional label rolls. Instead of having a separate backing material for each label, the adhesive is directly applied to the facestock of the labels. This design eliminates the need for a liner between labels, resulting in a continuous roll of adhesive-backed labels.

This report studies the global Linerless Label Rolls production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Linerless Label Rolls, and provides market size (US$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year. This report explores demand trends and competition, as well as details the characteristics of Linerless Label Rolls that contribute to its increasing demand across many markets.
