Abstracts

According to our (Global Info Research) latest study, the global Linters market size was valued at US\$ 75.32 million in 2025 and is forecast to a readjusted size of US\$ 114 million by 2032 with a CAGR of 6.1% during review period.

In 2025, global sales of Linters reached approximately 120 k tons, with an average market price of about USD 610 per ton, an annual production capacity of roughly 190 k tons, and an industry-average gross margin of approximately 22%.

Linters are the short, fine fibers that remain attached to the cottonseed after ginning has removed the longer lint fibers; they are mechanically cut, scraped, or brushed off the seed in dedicated delinting processes. Although often regarded as a by-product of cotton processing, cotton linters are highly valued as a high-purity cellulose source used to manufacture cotton linter pulp, specialty papers, nitrocellulose, cellulose ethers, and cellulose acetate for films, coatings, and other industrial applications.

Upstream, cotton linters originate from seed cotton production and ginning/delinting mills: seed cotton is ginned to separate lint and seed, and the remaining fuzz on the seed is removed in one or more delinting steps to produce first-cut and second-cut linters, which are then processed in linter-pulp mills through cleaning, cooking, bleaching, and refining. The midstream segment converts linters into linter pulp and high-purity cellulose, further upgrading into cellulose ethers, cellulose acetate, and other specialty cellulose products; downstream consumption is concentrated in nitrocellulose for coatings, inks, and synthetic leather, construction and pharmaceutical cellulose ethers, films and filter media, specialty and archival papers, and pharmaceutical/food excipient applications. Overall demand is closely linked to global cotton output and installed capacity for specialty cellulose and nitrocellulose, making linters a structurally

necessary feedstock with moderate cyclicalities but relatively rigid medium- to long-term consumption.
