According to our (Global Info Research) latest study, the global Linux-based Network Operating System market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The adoption of SDN principles, which advocate for decoupling network control from the underlying hardware through programmable interfaces, drives demand for flexible and interoperable NOS solutions. Linux-based NOS platforms provide the foundation for SDN deployments, enabling centralized network management, automation, and orchestration.

Open networking initiatives, such as the Open Compute Project (OCP) and the Open Networking Foundation (ONF), promote the adoption of open standards, open-source software, and disaggregated network architectures. Linux-based NOS solutions align with these initiatives, offering vendor-neutral, community-driven alternatives to proprietary network operating systems.
