Abstracts

The global Linux-based Network Operating System market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

The adoption of SDN principles, which advocate for decoupling network control from the underlying hardware through programmable interfaces, drives demand for flexible and interoperable NOS solutions. Linux-based NOS platforms provide the foundation for SDN deployments, enabling centralized network management, automation, and orchestration.

Open networking initiatives, such as the Open Compute Project (OCP) and the Open Networking Foundation (ONF), promote the adoption of open standards, open-source software, and disaggregated network architectures. Linux-based NOS solutions align with these initiatives, offering vendor-neutral, community-driven alternatives to proprietary network operating systems.

This report studies the global Linux-based Network Operating System demand, key companies, and key regions.
