Abstracts

The global Liposomal Iron market size is expected to reach \$ 139.9 million by 2029, rising at a market growth of 6.4% CAGR during the forecast period (2023-2029).

Liposomal iron is the latest formulation form of iron supplements and is particularly suitable for pregnant women and children due to its high safety and effectiveness. Its absorption rate is much higher than other iron supplements. It has a unique phospholipid shell that can fuse with cell membranes, deliver iron ions directly into cells, and then deliver them to various parts of the body. In addition, liposomal iron can protect iron from oxidation during transportation, thereby improving iron usage efficiency.

Liposomal iron is an innovative iron supplement preparation. Its special feature is that the drug is encapsulated in a lipid bilayer to form microvesicles. It uses a phospholipid shell as a protective layer to directly transport iron ions. to the interior of the cell.

This report studies the global Liposomal Iron production, demand, key manufacturers, and key regions.
