Abstracts

According to our (Global Info Research) latest study, the global Liposomal Silybin market size was valued at US\$ 140 million in 2025 and is forecast to a readjusted size of US\$ 216 million by 2032 with a CAGR of 6.3% during review period.

In 2025, global liposomed silybin production reached approximately 4549 tons, the average price is 30 usd/kg. Liposomed silybin is a high-end formulation that encapsulates and modifies the natural drug silymarin using liposome nanoparticle drug delivery technology. Through its 'phospholipid bilayer' nanostructure, it solves the global challenge of silymarin's poor solubility and absorption, significantly improving its bioavailability and targeting.

The annual production capacity of liposomal silymarin is typically 300-500 tons per year, with a gross profit margin of around 28%.

Downstream consumption of liposomal silymarin is as follows: medical grade 46%, cosmetic grade 39%, other grades 15%.
