Liposomal supplements are a form of dietary supplements that utilize liposomes to enhance the delivery of nutrients to the body. Liposomes are tiny spherical vesicles composed of a lipid bilayer, similar to cell membranes. They can encapsulate various substances, including vitamins, minerals, antioxidants, and other bioactive compounds. The main idea behind liposomal supplements is to improve the absorption and bioavailability of these nutrients.

Traditional supplements — like capsules, tablets, powders, and gummies — and even some nutrients from food are not processed and absorbed efficiently and are passed as waste, never making it into your cells where they're needed.

Liposomal supplements improve nutrient absorption by bypassing nutrient absorption pathways that can be affected by several factors, including those listed below:

Other substances being digested interfere with nutrient absorption;

Poor digestive health prevents nutrient absorption;

Medications interfere with nutrient absorption;

Toxic substances prevent nutrient absorption;

Water-soluble vitamins can't be stored.
