## Abstracts

The global Liquid Argon Cryogenic Storage Tank market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Liquid argon cryogenic storage tanks have the characteristics of low-temperature storage, high purity, high energy density, and low-pressure transportation. When using liquid argon cryogenic storage tanks, safety operating procedures must be strictly followed to ensure the safety of equipment and personnel.

The liquid argon cryogenic storage tank is a device used to store and transport liquid argon. Liquid argon is a liquid form of argon gas cooled to extremely low temperatures (-185.9 degrees Celsius), because argon gas is colorless, odorless, and non-toxic at room temperature. Liquid argon cryogenic storage tanks usually adopt a double-layer structure. The inner layer is a sealed container for storing liquid argon, and the outer layer is an insulation layer to reduce heat conduction and maintain low temperature. The storage tank is usually equipped with liquid level gauges, pressure control systems and other equipment to monitor and control the storage status of liquid argon.

This report studies the global Liquid Argon Cryogenic Storage Tank production, demand, key manufacturers, and key regions.
