Abstracts

Aseptic Packaging is a globally accepted technique for packaging of liquids and semi-solids contents ideally for on the go drinking. The term “aseptic” comes from the Greek word “septicos,” which means “without potentially pathogenic microorganisms” in food.

Therefore, aseptic packaging is the filling of a commercially sterile product into a sterile container under aseptic conditions and then hermetically sealing the containers so that it completely eradicates the possibility of contamination. It also ensures that your food doesn't require refrigeration and remains bacteria-free. Aseptic packaging is mostly used for liquid commodities like dairy, dairy alternatives, juice and for non-carbonated alcoholic beverage packaging, etc.

In Aseptic Liquid Packaging a multi-layered construction is made up of 75% of paperboard while the remaining comprises aluminum, and PE /MPE.that protects from spoilage and increases the shelf life of the product for long by maintaining chemical and sensory properties that keeps the packed content in its most pristine state.
