### Enquiry Now

Needle-free injection is a technology enables the delivery of drug through the skin, virtually nullifying the use of hypodermic needle. Liquid-based, needle-free injectors are used when the drug loaded in the injection is in the liquid form. This technology is highly beneficial for the evolving pharma industry. It is useful in mass immunization programmers, since it reduces the chances of needlestick injuries and other complications, including those arising due to multiple use of a single needle.

No complications with multiple use of single needle, low chances of developing needlestick injuries, and advancement in the technology for the development of liquid-based, needle-free injectors drive the growth of the global liquid-based, needle-free injectors market.
