According to our (Global Info Research) latest study, the global Liquid Chromatography Instruments market size was valued at USD 4409.8 million in 2023 and is forecast to a readjusted size of USD 5773.2 million by 2030 with a CAGR of 3.9% during review period.

Liquid chromatography is a technique used to separate a sample into its individual parts. This separation occurs based on the interactions of the sample with the mobile and stationary phases. Because there are many stationary/mobile phase combinations that can be employed when separating a mixture, there are several different types of chromatography that are classified based on the physical states of those phases. Liquid-solid column chromatography, the most popular chromatography technique and the one discussed here, features a liquid mobile phase which slowly filters down through the solid stationary phase, bringing the separated components with it.

Asia-Pacific is the largest Liquid Chromatography Instruments market with about 34% market share. Americas is follower, accounting for about 32% market share. The key manufacturers are Agilent Technology, Waters Corporation, Shimadzu, Thermo Fisher Scientific, PerkinElmer, AB Sciex (Danaher), Hitachi, Bruker, Bio-Rad, Jasco etc. Top 3 companies occupied about 55% market share.
