## Abstracts

According to our (Global Info Research) latest study, the global Liquid-cooled DC Charging Station market size was valued at US\$ 454 million in 2025 and is forecast to a readjusted size of US\$ 878 million by 2032 with a CAGR of 10.5% during review period.

In 2025, global Liquid-cooled DC Charging Station production reached approximately 22,697 units , with an average global market price of around US\$ 19,435 per unit. Gross margin is about 49%. The cost is 9,912 usd. Liquid-cooled DC charging stations are high-power electric vehicle charging systems that utilize liquid cooling technology to efficiently manage heat during fast charging. Unlike air-cooled systems, these stations circulate coolant through the charging cable and connector to dissipate heat, enabling sustained high current (often over 500A) and faster charging speeds (typically 250kW to over 1MW).

Liquid-cooled DC Charging Stations are emerging as a key component of high-power EV charging infrastructure. Future development trends mainly focus on higher power capability, lightweight design, and intelligent operation. As electric vehicles increasingly adopt 800-V and higher voltage platforms, charging terminals must support higher current and greater power output. Liquid-cooling technology effectively reduces heat generated in charging connectors and cables under high current conditions, enabling charging capacities of 600 kW or more. In addition, liquid-cooled designs significantly reduce cable weight, improving ease of use for drivers. In the future, liquid-cooled DC charging terminals will be increasingly integrated with smart charging networks, energy management systems, and energy storage solutions to optimize power distribution and improve operational efficiency. With the rapid expansion of highway ultra-fast charging networks and high-power urban charging stations, liquid-cooled DC charging terminals

are expected to see wider adoption in public fast-charging stations as well as logistics and heavy-duty EV charging scenarios.
