Abstracts

According to our (Global Info Research) latest study, the global Liquid Cooled General Purpose Server market size was valued at USD 6031.7 million in 2022 and is forecast to a readjusted size of USD 32980 million by 2029 with a CAGR of 27.5% during review period.

Liquid cooled servers use working fluid as a medium for intermediate heat transfer to transfer heat from hot areas to distant locations for cooling. Since the specific heat of liquid is much greater than that of air, the heat dissipation speed is much greater than that of air, so the cooling efficiency is much higher than that of air cooling. Since the fan is omitted, the noise can also be reduced. Future generations of servers may require liquid cooling as air cooling capacity is exceeded.

Market Drivers:

Data Center Expansion: The growing demand for data centers to support cloud computing, big data analytics, and online services is a major driver for general-purpose servers. These servers are the workhorses of data centers.

Virtualization: The adoption of server virtualization technology drives the need for more capable and versatile servers. General-purpose servers can host multiple virtual machines, optimizing resource utilization.

Cost-Efficiency: General-purpose servers are cost-effective compared to specialized servers. Businesses and organizations often prefer them for general computing tasks to maximize their IT budget.

Scalability: Many general-purpose servers are designed with scalability in mind, allowing businesses to start small and expand their IT infrastructure as their needs grow.

Market Restrictions:

Competition: The market for general-purpose servers is highly competitive, with many established and emerging manufacturers. This competition can put pressure on profit margins and limit market share growth.

Specialized Workloads: For highly specialized workloads with unique requirements, such as high-performance computing (HPC) or graphics processing, general-purpose servers may not be the optimal choice.
