According to our (Global Info Research) latest study, the global Liquid Cooled IT Container market size was valued at US\$ 450 million in 2024 and is forecast to a readjusted size of USD 2283 million by 2031 with a CAGR of 25.1% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Liquid-cooled IT containers are modular data center units designed for high-heat-density computing tasks (such as AI model training, scientific computing, large-scale rendering, etc.). It uses cold plate liquid cooling or immersion liquid cooling technology to directly or indirectly contact IT equipment with coolant, effectively remove heat, significantly improve heat dissipation efficiency, and reduce PUE. Compared with traditional air-cooled computer rooms, liquid-cooled containers have higher energy efficiency, lower noise, smaller footprint, and stronger environmental adaptability. They are suitable for occasions such as rapid expansion of data centers, edge node deployment, and temporary project support.
