According to our (Global Info Research) latest study, the global Liquid Cooling Equipment market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Liquid cooling equipment is a type of technology used to cool electronic devices, such as servers, by circulating liquid coolant through a system of pipes, pumps, and heat exchangers. The liquid absorbs the heat generated by the electronic components and transfers it away, dissipating the heat into the air or a separate cooling system. This method of cooling is becoming increasingly popular in data centers and other computing applications where high-density computing loads generate a significant amount of heat. Liquid cooling equipment can improve energy efficiency, reduce noise levels, and allow for higher density computing without the risk of overheating.
